## Abstract

**Objectives:** This study will evaluate the main hypothesis that supplementation with vitamins A, B, C, D, and E significantly improves the severity and mortality rate in ICU patients with COVID-19.

**Trial design:** This study is a randomized, single-blinded, two-arm (1:1 ratio) parallel group clinical trial.

**Participants:** We are conducting this study in patients with COVID-19 admitted to intensive care units at the Imam Khomeini Hospital Complex in Tehran, Iran.

The inclusion criteria are as follows: (1) aged between 20 and 60 years, (2) both male and female patients with COVID-19, (3) clinical or definitive diagnosis (using polymerase chain reaction (PCR) test), (4) patients have not participated in other clinical trials, and (5) no renal or hepatic abnormalities.

The exclusion criteria are as follows: (1) patients with specific and rare viral diseases such as HIV and (2) patients who have been undergoing chemotherapy for the past month.

**Intervention and comparator:** Duration of intervention: 7 days from randomization  
Intervention in the treatment group:

- Vitamin A 25,000 IU daily
- Vitamin D 600,000 IU once during study
- Vitamin E 300 IU twice daily

(Continued from previous page)

- Vitamin C is taken four times per day
- B vitamins are taken as a daily Soluvit [which included thiamine nitrate 3.1 mg, sodium riboflavin phosphate 4.9 mg (corresponding to vitamin B<sub>2</sub> 3.6 mg), nicotinamide 40 mg, pyridoxine hydrochloride 4.9 mg (corresponding to vitamin B<sub>6</sub> 4.0 mg), sodium pantothenate 16.5 mg (corresponding to pantothenic acid 15 mg), sodium ascorbate 113 mg (corresponding to vitamin C 100 mg), biotin 60 µg, folic acid 400 µg, and cyanocobalamin 5 µg]

The control group will not receive any supplements or placebo.

All supplements are made in Iran except for Soluvit (from Fresenius Kabi, New Zealand).

**Main outcomes:**

1. Weight, height, and BMI
2. Severity of pulmonary involvement according to CT scan
3. Respiratory support (invasive or non-invasive)
4. Percentage of oxygen saturation (SpO<sub>2</sub> level)
5. Serum levels of WBC, CRP, ESR, IL6, IFN- $\gamma$ , and TNF- $\alpha$
6. The patient's body temperature
7. The presence or absence of involvement of organs other than the lungs (e.g., heart, liver, kidneys)
8. Duration of hospitalization
9. Mortality rate

**Randomization:** At baseline, eligible patients were randomly assigned to a 1:1 ratio to one of two groups: intervention and control. Block randomization is used based on the gender of patients.

**Blinding (masking):** Patients are unaware of being placed in the intervention or control groups after signing consent. All treatment staff will be aware of which group each of the patients is in due to the specific conditions of the ICU and the absence of placebo for the control group.

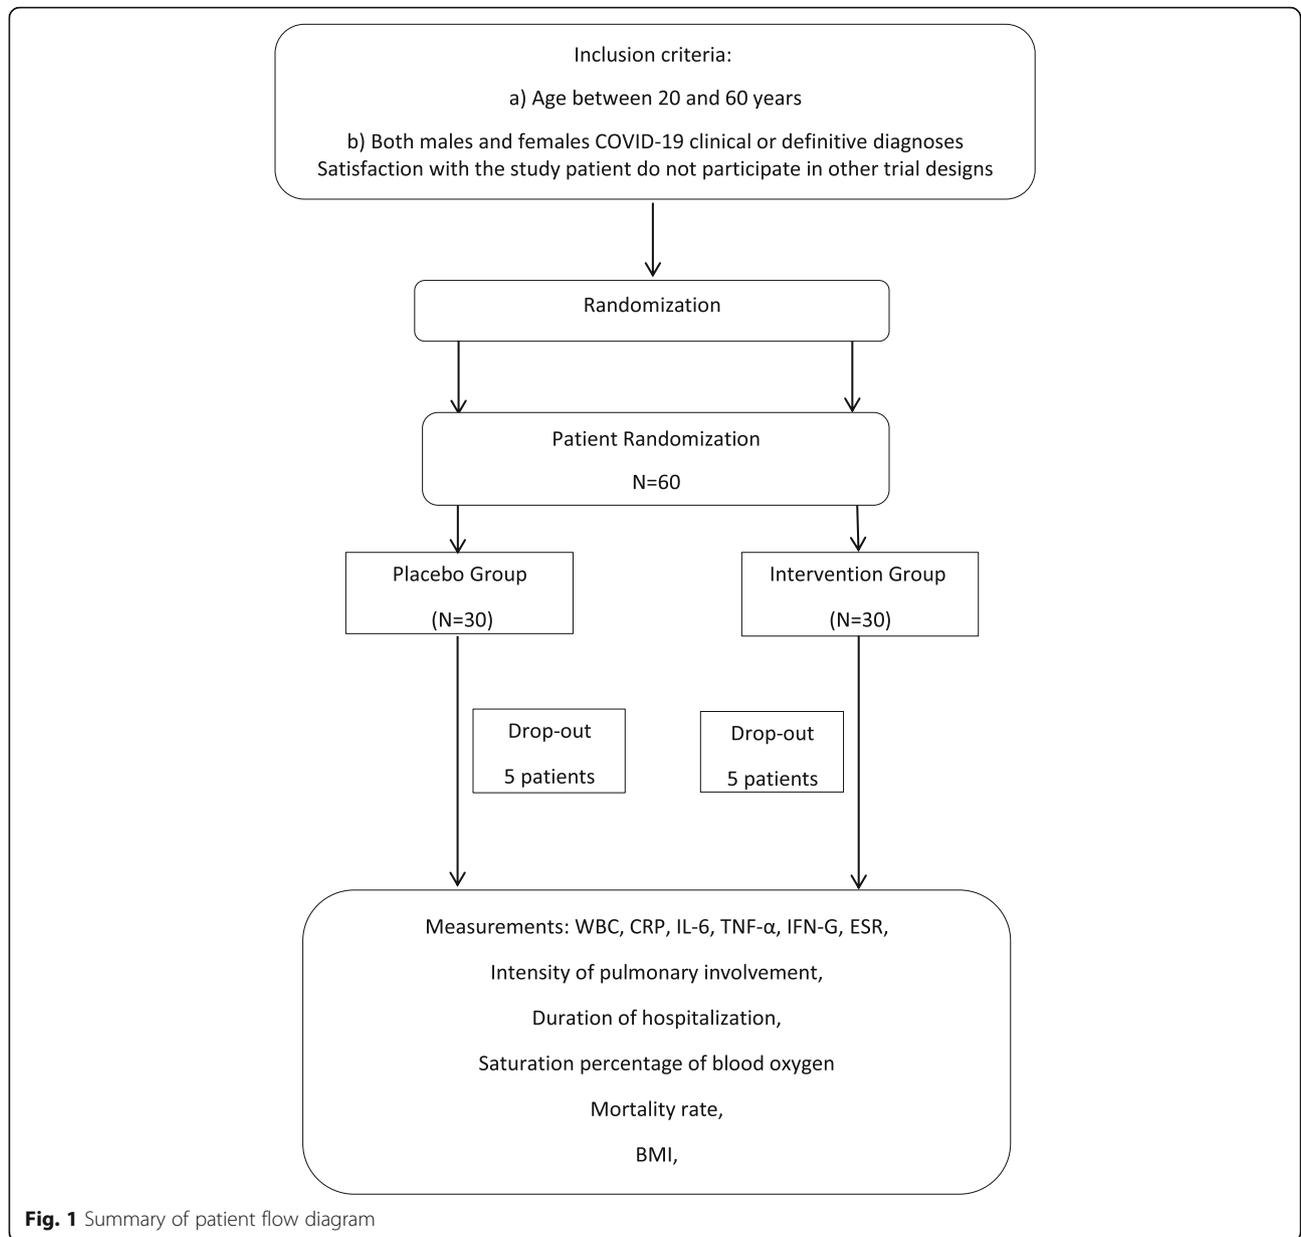

**Numbers to be randomized (sample size):** The researchers plan to include 60 patients in total, with 30 patients in each group.

**Trial status:** This is the first version of the protocol which started on April 2, 2020. Recruitment began April 2, 2020, and is expected to be complete by July 4, 2020.

**Trial registration:** The Iranian Registry of Clinical Trials [IRCT20200319046819N1](https://www.clinicaltrials.gov/ct2/show/study?term=IRCT20200319046819N1). Registered on April 4, 2020

**Full protocol:** The full protocol is attached as an additional file, accessible from the *Trials* website (Additional file 1). In the interest in expediting dissemination of this material, the familiar formatting has been eliminated; this letter serves as a summary of the key elements of the full protocol (Fig. 1, Table 1).

**Keywords:** COVID-19, Randomized controlled trial, Protocol, Vitamin B, Vitamin A, Vitamin D, Vitamin E, Vitamin C, Supplementation, Mortality rate, Intensive care unit

**Table 1** Outcome assessment

Level	Outcomes	Measurement
<b>Primary</b>	WBC, CRP, IL-6, TNF-α, IFN-G ESR	Laboratory blood test
	Intensity of pulmonary involvement	CT scan
	Mortality rate	Observation
<b>Secondary</b>	BMI	According to weight and height
	Duration of hospitalization	Observation
	Saturation percentage of blood oxygen	Pulse oximeter

#### Acknowledgements

We are thankful to Tehran University of Medical Sciences & Health Services for supporting the present research with COVID-19 grant number: 99-1-101-47104.

#### Authors' contributions

MT B m: inclusion and exclusion criteria checking, supervision on sampling and randomization, and final approval. S B: conceptualization, methodology, analysis and interpretation of data, reviewing and editing, and final approval. A A: laboratory equipment and tests, and supervision. L A: inclusion and exclusion criteria checking, supplementation, and data collection. A H: sampling, inclusion and exclusion criteria checking, supplementation, and data gathering. M M: acquisition of blood sample and laboratory tests. M F: analysis of pulmonary scans. The authors read and approved the final manuscript.

#### Funding

We are grateful to Tehran University of Medical Sciences & Health Services for supporting the present research with COVID-19 grant number: 99-1-101-47104. Tehran University of Medical Sciences confirmed the study design, data collection, analysis, and interpretation of data and writing of the manuscript that are done honestly by the researchers alone.

#### Availability of data and materials

The corresponding and first authors have access to the data in a SPSS file.

#### Ethics approval and consent to participate

The Ethics Committee of the Medical University of Tehran approved the study on March 31, 2020 (IR.TUMS.VCR.REC.1399.090). The participants will complete a written consent prior to inclusion into the study. Information from all patients will be kept confidential, and all those that do not wish to continue can withdraw from the study at any time.

#### Consent for publication

Not applicable

#### Competing interests

The authors declare that there are no competing interests in the present study.

Ready to submit your research? Choose BMC and benefit from:

- fast, convenient online submission
- thorough peer review by experienced researchers in your field
- rapid publication on acceptance
- support for research data, including large and complex data types
- gold Open Access which fosters wider collaboration and increased citations
- maximum visibility for your research: over 100M website views per year

At BMC, research is always in progress.
